Marketing

Branding and Differentiation - NextBottle's distinctive shape, large surface areas for labeling, and ability to color code allow for greater branding and differentiation.

Packaging Development

Reclosable Package - Because NextBottle is a reclosable package providing the same child-resistant/senior-friendly (CR/SF) attributes of a traditional medicine bottle, it has an advantage over f=1 packages such as various blister pack solutions. A reclosable package also enables CR/SF testing without the drug, precluding unnecessary risk at the end of development.

Packaging Materials & Drug Stability - NextBottle uses the same materials as standard bottles and has an induction seal, allowing for the bridging of stability data from a conventional HDPE bottle.

Manufacturing

Equipment Compatible - NextBottle can be run on commonly used packaging equipment already installed at most pharma companies.

Faster Production Runs - NextBottle lowers costs and improves production times, as there is no need for blisters, carded CR/SF boxes and a heat sealing process.

Regulatory

CR/SF - NextBottle incorporates the customary push and turn mechanism that ensures positive CR/SF test results.

Counterfeit Protection - NextBottle discourages counterfeiters.

Recyclable - 100% recyclable plastic. No need for separation of materials as in blisters.

Retail Pharmacy

Label Area - NextBottle provides a large surface area for the Rx label.

Storage - NextBottle easily stacks on the pharmacy shelf for maximum use of space.

Patients

Push and Turn - nothing to learn, as it uses same method of opening as a standard pharmacy amber bottle.

Ease of Dispensing - Patient-friendly unit dosing without the struggling associated with removing drugs from blisters.

Improved Compliance - NextBottle indicates day and/or time of each unit dose as dispensed. No more forgetting whether dose was taken. Better compliance means better disease outcomes.

Portability & Storage - NextBottle facilitates drug portability & storage in an elegant and durable package. No more crushed blister boxes.

Great branding opportunity.

Induction seal for stability.

Large area for Rx label.

Stackable on pharmacy shelf.
