Features & Benefits

Great branding opportunity.

Marketing

Branding and Differentiation - NextPak's customizable shape, large surface areas for labeling, and ability to color code allow for greater branding and differentiation.

Packaging Development

Reclosable Package - Because NextPak is a reclosable package, it has an advantage over current f=1 blister pack solutions. A reclosable package also enables CR/SF testing without the drug, precluding unnecessary risk at the end of development.

Primary Packaging - Through a proprietary closing and locking feature, the blister card is not removable and is part of the primary packaging.

Manufacturing

Equipment Compatible - NextPak can be run on commonly used packaging equipment already installed at most pharma companies.

Faster Production Runs - Because of no heat sealing process common with other blister packs, production runs are faster and less expensive.

Regulatory

CR/SF - NextPak has passed child-resistant and senior-friendly testing by Perritt Labs.

Counterfeit Protection - NextPak discourages counterfeiters.

Retail Pharmacy

Label Area - NextPak provides a large surface area for the Rx label.

Storage - NextPak easily stacks on the pharmacy shelf for maximum use of space.

Labeled unit doses.

Patients

Improved Compliance - Labeling around each dose indicates associated day or time. No more forgetting whether dose was taken. Better compliance means better outcomes.

Portability & Storage - NextPak facilitates drug portability & storage in an elegant and durable package. No more crushed blister boxes.
